

## Evolution Fact Sheet

**Big Bang-** When was the last time we saw order, design, intelligence and intricacy come out of an explosion?

**Universe-** Literally means single spoken sentence.

**7 Day Week-** Where did that come from and why are you still using it?

**Beginning-** You believe "in the beginning dirt" and I believe "in the beginning God." Which one makes more sense to you?

**Conservation of Angular Momentum-** When something is spinning clockwise and pieces break off of it, they MUST spin the same direction. Why then are there at least two planets and nine moons in our solar system spinning backwards? Why are there whole galaxies spinning backwards?

**Geologic Column-** If each layer supposedly represents a certain "age" of Millions of Years, then how can trees, shells, animals, etc. go through many of layers. The top part of them would have been decayed before the next "Millions of Years" came. This is evidence for rapid burial, Noah's Flood.

**Transitional Fossils-** Where are all of the "missing links?" They're still missing! (Have picture of supposed "missing links" on hand)

**FACT about the EYE-** the focusing muscles in the eye move an estimated 100,000 times each day. The retina contains 137 million light-sensitive cells.

**Darwin Quote About The Eye-** "To suppose that the eye...could have been formed by natural selection, seems, I freely confess, absurd in the highest degree."

**Another Darwin Quote-** "If it could be demonstrated that any complex organ existed which could not have been formed by numerous, successive, slight modifications, my theory would absolutely breakdown."
